

Keep your crystal in this booklet as a record of your experiment. In time it probably will dissolve away into the air and you'll have to grow another one. Try growing a crystal from other things like sugar, Epsom Salts or copper sulphate which grows lovely blue crystals.

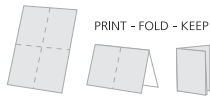

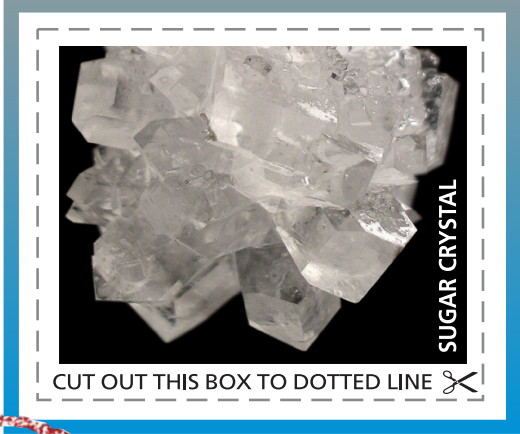

write what your crystal is made of here

This is
the
crystal
I grew
from

Carefully cut out this square and the one on the front page and then tape the top of the crystal thread to the back of the front page so that the crystal hangs down into the window just like the one in the photograph on the instruction sheet.
